Introducing the Eleven Inch, Wireless, Screen Replicator Included With 3D Measurement VJ-4 Borescopes

The new, standard, 11" screen replicator wirelessly mirrors and controls the **3.9 mm** or **6.0 mm Front View** or **Side View** **3D Measurement Borescope** providing more screen space to examine indications, perform measurements, and share what you're seeing with others.

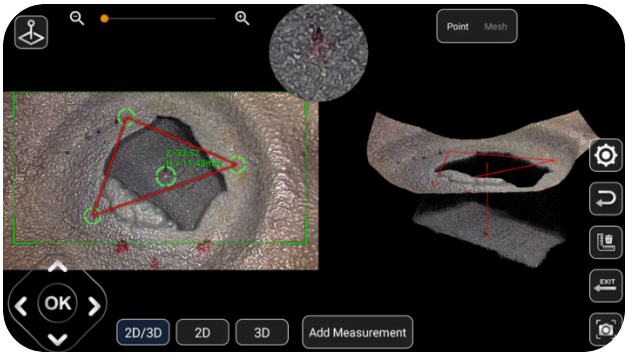

Interested in a 3D Measurement Borescope or the screen replicator for a non-3D VJ-4 borescope? **Call us at** **231-934-1171**.

"We Were Blown Away"

After demoing the 3D Measurement VJ-4 and Screen Replicator with their entire inspection team, an energy giant's reaction was immediate:

"We were blown away. **It was simple, intuitive, incredibly accurate**.

The connection with the tablet was seamless and improved the functionality of the scope just by making the screen so much larger and accessible. We're super impressed."

From Finding to Reporting: How to Make Measurements Actionable

An inspector finds a defect. Maintenance needs to understand it. Engineering may need to evaluate it. And months later, someone may need to know exactly what was found. **VJ-4 3D Measurement** and **ODIN Borescope Report Maker** work together to turn inspection findings into clear, measurable, consistently documented data.

Instead of:
"There's significant pitting in this area."

You Can Document:
Where the indication is, what it looks like, its measurable dimensions, and supporting inspection images—all in a structured report.

ODIN Borescope Report Maker is included with your VJ-4 purchase to quickly turn inspection images into organized, professional reports.
